Department of CSE(DS)

GUIDELINES FOR B.TECH. MINI PROJECT

These guidelines for successful completion of B.Tech. Projects are to facilitate departments in effective and uniform regulation of projects being carried out by undergraduate students in 5th semester.

NUMBER OF COPIES TO BE SUBMITTED FOR EVALUATION:

B.Tech.Mini Project **One copy** to be submitted to the College

Text :

The text should be typed in **12** font size **Times New Roman** style in 1.5 spacing on one side of A4 size page (Executive Bond) only. The Captions for figures should be typed at the its bottom for example 4th figure in Chapter 3 should be captioned as **Figure. 3.4Title of Figure**. The captions for tables should be typed at its top for example 7th table in Chapter 3 should be captioned as **Table. 3.7 Title of Table**. The text format in the chapter will be

- Main heading Size:16 (Bold)
- Sub heading1.1:14 (Bold)
- Subtitle.1.1.1:12 (Bold)
- Text(script):12

Numbering of Chapters, Sections and Sub-sections.

The numbering of Chapters, division and sub-divisions should be done using Arabic numerals only and further decimal notation should be used for numbering the divisions and subdivisions within a chapter. For examples sub-division 4 under division 3 belonging to chapter 2 should be numbered as 2.3.4.

Equations appearing in each Chapter should be numbered serially, the numbering commencing fresh for each Chapter or Appendix. For example, an equation appearing in Chapter 2, if it happens to be the eighth equation in that Chapter 2 should be numbered (2.8). While referring this equation in the body of the project it should be referred to as Equation (2.8).

List of References/Bibliography

Any work of other researchers, if used either directly or indirectly, the origin of the material thus referred to at appropriate places in the report should be indicated. The citation may assume any of the standard form (preferably ASCE, ASCE, IEEE, or other international Journal Publishers such as Elsevier, Kluwer, Pergamon etc.). For more details the students may contact their respective guides.

Page Dimensions and Margin

The dimensions of the final bound 2 copies report should be Standard A4 size (297mm x 210mm) paper may be used for preparing the copies. The Project (at the time of submission) should have the following page margins: Top and Bottom edge : 25 mm (1 inches) Left and right side : 30 mm (1.25 inches)

Page Numbering

All pages numbers should be typed at the **center of page bottom**. The preliminary pages of the Project (such as Title page, Table of Contents, List of tables and figures, Notations, Abbreviations etc.) should be numbered in **lower case Roman numerals**.

Page Type:

The project report should **printon white paper with Spiral binding.**

SizeofReport

The size of Project report should not **exceed 50 Pages** of typed matter reckoned from the First page of Chapter 1 to the last page.

Sequence of Report:

1. CoverPage
2. Synopsis(2-3Pages)
3. Table of Contents along with page numbers
4. List of Figures
5. List of tables
6. List of Symbols, Abbreviations
7. Chapter1: Introduction
8. Chapter-2: Hardware and Software Requirement
9. Chapter-3: Data Flow Diagram / ER Diagram
10. Chapter4: Database Design / Project Modules Design / Database Tables
11. Chapter5: Project Snapshots
12. Chapter6: Limitations
13. Chapter7: Future Scope
14. Conclusion
15. References

Chapter1: Introduction: This chapter covers the Introduction of the Project, objectives, motivation, problem definition, etc. (3–5 pages)

Chapter-2: Hardware and Software Requirement : Write down in brief about the Hardware and Software requirements of your project. (minimum 1-2 Pages).

Chapter 3: Software Requirement Specification : Write Down the complete specification and description of requirements of software that needs to be fulfilled for successful development of software system. These requirements can be functional, as well as non-functional as Security, Reliability, Reusability,

Application compatibility, etc. depending upon type of requirement.

Chapter 4 : DFD /ER Diagram/ wireframe/Application Architecture: Students should explain their Project DFD/ER Diagram/Application architecture (As per needed in Project)in details with various levels of DFD and ER diagrams are using in Project. (minimum 3-4 Pages).

Chapter 5: Project Modules Design / Database Tables / Software Features

Write down the design of the modules, Data base tables or software features of the software.

Chapter6: Project Snapshot: Add completed project modules, snapshots, results, and analysis of your project.

Chapter7: Limitations: Write down the limitations of your project.

Chapter8:Future Scope: Write down the future scope of your project.

Sample Format is attached:

CHAPTER 1

INTRODUCTION

Since the rise of the Internet, one of the most important factors in information technology and communication has been the **security of information**. Cryptography was created as a technique for securing the secrecy of communication, and many different methods have been developed to encrypt and decrypt data in order to keep messages secret.

Unfortunately, it is sometimes not enough to keep the contents of a message secret—it may also be necessary to keep the **existence of the message** itself secret. The technique used to implement this is called **Steganography**.

Steganography is the art and science of invisible communication. This is accomplished by hiding information within other information, thus concealing the existence of the communicated message.

The word *steganography* is derived from the Greek words **"stegos"** meaning *cover* and **"grafia"** meaning *writing*, together defining it as **"covered writing."** In **image steganography**, the information is hidden exclusively in images.

The idea and practice of hiding information has a long history. In *Histories*, the Greek historian **Herodotus** writes of a nobleman, **Histaeus**, who needed to communicate secretly with his son-in-law in Greece.

Using well-known channels greatly reduces the risk of information being leaked during transmission. For example, hiding information in a photograph of a company picnic is far less suspicious than sending an encrypted file.

Overview of the Steganography Process

Although steganography is an ancient subject, its modern formulation is often explained through **Simmons' Prisoner's Problem**. In this scenario, two inmates wish to communicate secretly to plan an escape. However, all their communication passes through a **warden**, who will throw them into solitary confinement if she suspects any covert communication.

This model highlights the challenge of modern steganography — creating methods of communication that remain **undetectable** while still being **reliable** for transmitting hidden information.
